

Description

The μPD4364 is a high-speed, 8192-word by 8-bit static RAM. Its unique circuitry, using CMOS peripheral circuits and N-channel memory cells with polysilicon resistors, makes the μPD4364 a very low-power device that requires no clock or refreshing to operate.

Two chip enable pins are provided for battery backup application, and an output enable pin is provided for easy interface. Data retention is guaranteed at a power supply voltage as low as 2 V (-xxL and -xxLL versions).

The μPD4364 is packaged in standard and slim 28-pin plastic DIP, as well as plastic miniflat packages that are plug-in compatible with 2764-type EPROMs.
